

# EXPONENTIAL COLONY CONTROL. COMPLETE SPECTRUM OF COCKROACHES.

ADVION COCKROACH GEL is a highly palatable gel bait that provides cockroach control like no other. ADVION Cockroach Gel is powered by indoxacarb which has a unique mode of action allowing for the primary, secondary and tertiary control of cockroaches.

One cockroach exposed to ADVION Cockroach Gel unleashes a three step chain reaction. A primary cockroach is exposed to the gel through direct ingestion of the highly palatable bait. The toxicant is then spread through the population via normal cockroach behaviours such as ingestion of faeces and secretions from affected cockroaches.

ADVION Cockroach Gel has a unique mode of action where the active ingredient is converted to its more potent bio-active form and results in even more control of the infestation.

These secondary and tertiary effects provide the exponential control and the quick elimination of cockroach infestations. Complete population control is achieved as ADVION Cockroach Gel will reach the entire population when adequate gel is applied.

- ▶ Fast, thorough control of a wide spectrum of cockroaches
- ▶ Product of choice in sensitive situations such as schools, food handling establishments and hospitals
- ▶ Consistent quality formulation

## Ideal for use in commercial situations

ADVION Cockroach Gel is ideal for use in commercial situations as the 3 phase control ensures more complete control. With the constant moving of foodstuffs, pallets and boxes in and out of commercial situations, cockroach infestation is a common occurrence. ADVION Cockroach Gel can be transferred to these introduced cockroaches even after the initial consumption has occurred.

To further enhance the control of larger populations in commercial and domestic situations ARILON non-repellent insecticide also containing indoxacarb, can be applied over the top of the gel. This application technique has been shown to improve the uptake of gel and not detract from the gel as other sprays can do. Note: Never apply synthetic pyrethroid products with ADVION gels as this will slow both the consumption of bait and control of the population.

## Fast control of a wide spectrum of cockroaches

ADVION Cockroach Gel is effective on a broad variety of cockroaches including but not limited to German, American, Brownbanded, Australian and Oriental.

The laboratory trial results below highlight the fast performance and high level of control that can be achieved with ADVION Cockroach Gel when compared to other controls.

### Control of German Cockroaches (adults and nymphs)

## Directions for use

To achieve the best results from ADVION Cockroach Gel locate active sites and place baits where they will be found and eaten. Typical harbourage sites preferred by cockroaches include cracks, crevices, under appliances, sinks and other concealed areas.

- Gel should be applied as a 0.1 g spot or about 5 mm in diameter
- Light infestations – 2 spots/m<sup>2</sup>
- Heavy infestations – up to 5 spots/m<sup>2</sup>
